Relevant Date(s)

Due on February 17, 2010

Objectives

1. Choose team members

   Provide a written listing of who is on your team.

2. Develop a summary of project goals

   This should be limited to two (2) pages in length, and should focus on the development of a data warehouse in an Oracle database.

   The goals should be clearly and concisely stated to sufficiently answer the following:

   Who is the project sponsor?
   What will be the source of your data (i.e., explain your source system)?
   Why are the data in your source system a good candidate for warehousing?
   What transformations or data cleansing (if any) do you anticipate will be performed on the source system data?
   What data model do you anticipate using for your data warehouse?
   Who would you characterize might be your end-users of the data warehouse?
   How do you think the data warehouse can be used for analytical purposes (i.e., can you count, sum, or average the data, or perform categorical analysis)?

3. Obtain approval to proceed
